

JARVIS · TRACK 3

Styling Catalog

V3.2 · The Library Edition

Approved and locked 2026-08-18. One visual system for every screen: the Apple Music library form in JARVIS red, enforced by law tests on every build. This document is the reference; the laws are the gate.

Color Is Systemic

Fifteen colors. A category picks one and wears it everywhere it appears. Type glyphs are fixed. Red is rationed: primary actions, the current tab, Chat, negative money, overdue. Grey exists only for secondary text and dividers.

INFO

The Library Chassis

Every page shares one header system. The bar is sticky and invisible at rest; the moment the large title scrolls beneath it, it condenses into glass: centered title, hairline, red energy line. Actions live in the bar. Nothing ever touches the clock.

At rest · transparent

Condensed · glass + red line

- Large title and search live in the scroll, always in the same slots.
- Page actions are circular accent buttons in the bar, never floating in the page.
- Back buttons ride the bar and stay tappable at every scroll position.
- Lists are full bleed. Cards survive only for stats and heroes, banners and tips, sheets, and the day-draft proposal. Scarcity is what makes a card mean something.
- Section heads: bold Title Case at the left edge, count or See All at the right edge.

Rows & Alignment

Four locked columns: margin 16 · leading glyph · text edge · trailing -16.
 Dividers inset to the text edge. Numbers are tabular so columns stay straight.
 One text edge per list, never mixed.

Library Row

THURSDAY

The day is said once above a group, never repeated per row.

Atoms

Actions are buttons. Choices are chips. Counts are pills. Numbers you set are steppers, and tapping the number opens the keypad. One primary action per surface, in accent, with the glow.

SETS

Tabular numerals, hairline top light, tint carries meaning. Values roll when they change.

Banners & Feedback

Amber means work moved without you. The accent bar is an offer. Tips are a glyph, a Title Case title, a gray sub, and an X. Every mutation gets a receipt with Undo. Destructive actions arm with a second tap.

A bounded chooser: the tap is both the answer and the action, capped at four, with an escape.

Text Laws

Every String Has a Role

Page title · eyebrow · section head · row name and meta · urgency · pill · stat tile · day divider · banner · empty state. A string that fits none of these gets restructured, never styled in place. Legal pages and conversation are the only prose surfaces.

Title Case, Everywhere

- **Title Case:** page titles, section heads, row names, buttons, chips, sheet titles, tab labels, placeholders that are labels. Small words stay down: a, an, the, to, of, in, with, for.
- **ALL CAPS** is rationed: eyebrows, kickers, pills, urgency. Nothing else.
- **Meta stays lowercase:** fragments with middle dots · like this one.
- **Conversation is sentence case:** onboarding, chat, check-ins, and any question.
- **No sentences in the UI:** no period-then-capital in a rendered string. Middle dots divide clauses.
- **No em dashes anywhere.**

Everything Actionable Is a Control

- Copy that names an action IS the button. Directions to a button elsewhere are illegal.
- Empty states carry their action button, not an address.
- Counts are pills. Figures are stat tiles. Never prose.

Motion & Enforcement

Motion Rules

- One spring curve, shared by banners, sheets, and chips.
- Lists stagger on first paint only, 30ms apart. Tab switches are instant, always.
- Numbers roll to their new value. Reduced motion snaps.
- Rows compress under the thumb. Primary buttons carry the red glow.
- The day ring is a red-orange gradient arc with a soft glow; it bursts at 100%.
- Completion fires the micro-burst and the native haptic.

The Gate

- Laws as tests: em dash, short copy, casing on every surface, CSS class existence, versioned keys, typed queries, AI gate, editing primitives. A violation fails the build.
- Lint gate: rules-of-hooks at error. tsc, vitest, and the production build run on every commit.
- Preview discipline: visual changes ship 390x844 previews for approval before code.
- New CSS lands only in the flagged blocks of components.css, citing its approval.

Locked 2026-08-18. Changes to this catalog require a new approved revision. The in-repo copy (jarvis-app/STYLING_CATALOG_V3.md) is the source of truth; this PDF is its visual record.
